LEGAL AND REGULATORY FRAMEWORK OF SCIENTIFIC RESEARCH ON LAND USE

This publication provides a brief description of the legal framework that governs land-use research. The reason for this is that the experience of land use has been negative for many decades.

First of all, it is the result of a strictly consumerist approach to the environment, of which land is an essential component, as well as the extremely low level of environmental culture of Russian society. Such attitude is similar to members of different social strata, regardless of social or official status, property, education, and culture.

Nevertheless, over the past quarter of a century, Russia has undertaken some concrete and wide-ranging measures intending to eliminate the harm that it had previously suffered. In the spring of 2021, the Government of the Russian Federation approved new plans for the further qualitative rehabilitation of the land. The Government approved new plans. Relevant research in this area is a prerequisite for the success of future tasks

The authors of the publication support the position that, according to the main criteria, the legal and regulatory framework of land-use research meets most of the requirements.

However, the article devotes particular attention to increasing the level of legal liability for land-use offenses.

Keywords: law, regulation, land use, research, contract, publication, method, financing, ecology, project

ECONOMIC THEORY

Gerasimov B.N.

THEORETICAL AND METHODOLOGICAL TOOLS IN THE MANAGEMENT OF ECONOMIC SYSTEMS

Annotation. Due to the analysis of literature and empirical research, we formed an ontology of the science of management and its main sections: theory,

methodology, technology with the attribution of their main attributes to them. The use of methodological tools made it possible to systematize and unify the attributes of the methodology section of management science. Based on the study of management functions, a complete management cycle was determined and a model of building a functional management process for use in economic systems of the "organization" type was developed. Theoretical and methodological tools make it possible to consciously interpret and apply the attributes of management science in processes and objects in the social and economic environment of modern public space.

Keywords: management science, management philosophy, ontology, theory, methodology, technology, attributes, management functions, model
